## **DETAILED ACTION**

### ***Election/Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a composition comprising green tea, a green tea leaf extract chromium and 5-hydroxytryptophan and beta - hydroxy beta-methylbutyrate, classified in class 424, subclass 185.1 for example.
- II. Claims 14-20, drawn to a composition comprising green tea, a green tea leaf extract, chromium, and a cayenne fruit additive (as a few examples) classified in class 424, subclass 604 for example.
- III. Claims 21-22, drawn to a weight controlling kit comprising green tea, a green tea extract, a chromium additive and a soy based meal replacement and method for controlling weight with such a composition, classified in class 424, subclass 757 for example.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability. and (2) that the

Art Unit: 1651

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because many of the additional constituents present in the combination possess medicinal properties of their own. The subcombination has separate utility such as an antibacterial (green tea is known to contain antibacterial agents).

Inventions I+II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions provide for different constituents in the mixture which would necessarily produce respective medicinal results in patients. For example, claims 21 and 22 do not contain constituents such as 5-hydroxytryptophan, but add a 'soy based meal replacement.' Soy, in its own respect is known for possessing many medicinal qualities. For example, soy contains many phytoestrogens which are said to compete with natural estrogen thereby effecting fertility.

The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group. Because these inventions are distinct for the reasons given above and the search required for each Group is not required for the others, restriction for examination purposes as indicated is proper.
